Diagnostic findings and information:

Zuli came in for a recheck ultrasound today. Earlier this month she had elevated liver and pancreatic values. An ultrasound on 8/8 showed some pancreatic changes and an abnormal hypoechoic structure in the left cranial abdomen.

Zuli is doing well, she is back to her normal self. Weight is stable. Recheck lab work from this week was all within normal limits, aside from normal breed changes on the CBC.

Zuli's recheck ultrasound showed improvement - the structure previously seen in the left abdomen was not identified today, and the structural changes in the left pancreatic area are less pronounced.

I would plan to follow lab work in 6 months on Zuli, but I do not need to see her back unless any new symptoms or concerns arise.

Prescription refills are normally to be filled by the attending veterinarian who is reassessing your pet's medical condition. Please contact **Healing Hands Animal Hospital** if your regular veterinarian is following care/rechecks of your pet's condition and refills of medication are needed. Routinely allow three working days for prescription refill requests to be submitted and prepared.

*Unfortunately, large amounts of time spent with previously referred clients in phone/fax communications and long distance charges necessitated that A VIM start billing/charging clients for follow-up phone conversations and communications in November of 2001. This **does not affect routine new information calls/consultations**, existing clients for brief communications between A VIM and the client or referring DVIMs, or patients whom we have seen in past month. This fee will be \$39 per 15 minutes.*
